EMART - SHREENATH ENTERPRISE
We provide cost-efficient and scalable customize apps solutions

Emart.xyz is one of the fi nest e-commerce platform in Gujarat, providing pre-packed school books and stationery. They come up with an idea that can remove a painful process for stationary vendors & parents to sell & buy book-sets before school starts.

CHALLENGES

Our team took the challenge & played a good role to finish it successfully

- **Categories & Parameters**

  Deeper and complex logic applied that gives a simple view.

- **Products**

  Complex book-sets structure in a simple user interface flow view.

- **Booksets**

  Organized books based on school & class wise stream.

- **Feedback**

  A proper channelized feedback system that uniquely customized for emart's team, vendors and users.

- **Order Tracking System**

  A kanban structure to view orders that can easily manage order various statuses.

OUR SOLUTIONS
We provided business-ready scalable and cost-efficient solutions

They come up with an idea that can transform educational book industry to serve the best hassle-free solution for the stationery vendors, publications, schools, parents and students. We studied their requirements and give them the best solution. We're stretching ourself to cover all requirement points to manage e-commerce platform smartly so they can simply manage things outstandingly.

We have provided them the solution for mobile and web app design and development as well as backend and server setup services. The bigger challenge is the timeline and yes we did this project COVID19 times, our dedicated team did it as per the given new form of timeline for the project.

APPLICATIONS
Simple and unique solution for teaching & learning management

It has an outstanding user interface with complex and deeper data display that can tell us what we have done for our client. It is a uniquely customized solution as per their needs. We have provided a complete mobile and web app solutions to our clients that can help them to configure their products, inventories, vendors, staff, offers, discounts and so on.

The vendor can manage their stocks and orders with the best user experience and automated solution. They can also configure their staff and define roles and responsibility. The vendor gets notify for each new order and can update the status of any order they received.

User can order books, book-sets, and stationery related items online with the proper tracking system. It will notify the user at every step for their all orders.
